IN Arakelyan, R. N.; Dadayan, V. M.; Burykina, I. I.  
AB Bleaching of clays includes prepn. of a suspension, treating it with H2SO4 and ammonium salt, followed by washing. To increase the degree of whiteness and plasticity of the clays, the suspension was treated with H2SO4 up to pH 2-2.5 and then with a bacterial culture Thiobacillus ferrooxidans and with 0.3-0.4 g ammonium phosphate/L suspension, followed by bubbling with compressed air 1-1.5 vol./h per vol. suspension at 24-6.degree. for 4-5 days and the sol. Fe compds. were removed.
